Research studies currently active.

*In addition to holding brief descriptions of the projects, these wiki pages are used by the lab to document ongoing work (for example, software programming notes).*

*We like to write lots of notes on the fly. The waist-deep-in-a-project, nuts-and-bolts documentation pages are usually only available to lab members.*

*We are happy to share code and techniques upon request.*

# Multiple Neural Pathways for Encoding Visual Shape

# Dorsal Visual Cortex Processes for Shape Perception

## Shape of 3D concavities

[fMRI of perceiving shape from 3D concavities](#)

## 3D letter recognition

[3D letter recognition and visual crowding](#)

---

## Role of the Basal Ganglia in Shape-based Object Recognition

[Holistic perception in Parkinson's Disease](#)

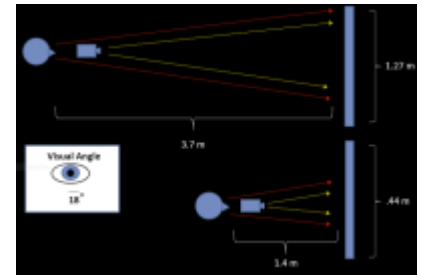

---

## Influence of Physical Size on Perception and Memory for Objects

## Effect of real-world size on object shape perception

### Physical Size and Holistic Perception

### fMRI Study on Physical Size and Holistic Perception

## Effects of large-scale spatial separation on word item memory

### Learning in Large-Scale Interactive Displays

---

# Identifying Object Shape Features

## How does the visual system identify parts of common objects?

### Crowding and parts-based recognition

### Deferred decisions in object recognition

## Which face features do we use to recognize different emotions?

### Name That Emotion!

## **Detecting clusters of objects**

[What is a Cluster?](#)

---

# **Visual Numeracy**

## **Cortical networks for understanding numbers**

### **Mathematical Ways of Operating - Neural Correlates**

[Mathematical Ways of Operating - Neural Correlates](#)

### **Meta-analysis of numeracy neuroimaging**

[Meta-analysis of intraparietal sulcus \(IPS\) fMRI activation during numerical reasoning](#)

## **How does visual grouping affect enumeration?**

[Visual Number Sense](#)

[Visual Number Sense fMRI](#)

---
