Recipes

Replace single spaces after end of sentence with two spaces in Emacs

<2015.6.24>

Type the following:

```
[M-x] query-replace-regexp [RET]
\. \([A-Z]\) [RET]
. \1 [RET]
```

Emacs replacement trick ADC used when writing SPM table report tool

(from [here](#))

In output file ("taldaemon_i_plus.td.txt" e.g.), AC used emacs regexp (regular expression) to reformat BA's, and just copied a rectangle to get region descriptions:

```
[M-x] replace-regexp [RET]
^.*Brodmann area.\([0-9]+\).* [RET]
BA\1 [RET]
```

Emacs regexp for removing newline characters from text copied from Adobe PDF file

[Originally from Anthony's science.txt file, entry dated 2015-09-03]

To remove all Windows newlines:

```
M-x replace-regexp  
C-q C-j RET  
RET
```

To add a newline before heading names, e.g. "I." or "A."

```
M-x replace-regexp  
.\. RET  
C-q C-j \& RET
```

Sort article lists by year using awk and sed

[Originally from Anthony's science.txt file, entry dated 2015-07-18.]

Exported bibliography to clipboard in Zotero, pasted into Emacs to write new file:

```
.../VNLab/studies/ipsNumMeta/sources_number.txt
```

Try using awk to print column with year before whole rest of line

```
$ gawk '{match($0,"\\([0-9]*[a-z]?\\)",a)} {print a[0], $0}'  
sources_number.txt > sources_number_yearCol.txt
```

Remove parens from FIRST (year) on a line:

```
sed -r 's/[([0-9]*[a-z]?)]/\1/' sources_number_yearCol.txt >  
sources_number_yearCol_noParens.txt
```

Used rectangle register copy trick in Emacs to copy only first five chars (catches both 2012 and 2012b) and pasted ultimately to Excel column.
